

ScrapeBox Secrets - How to setup a Blogger Blog with the persuasion script.

After you create a new blog, go to Design.

In "design" add a new Gadget.

Add a HTML/JavaScript gadget

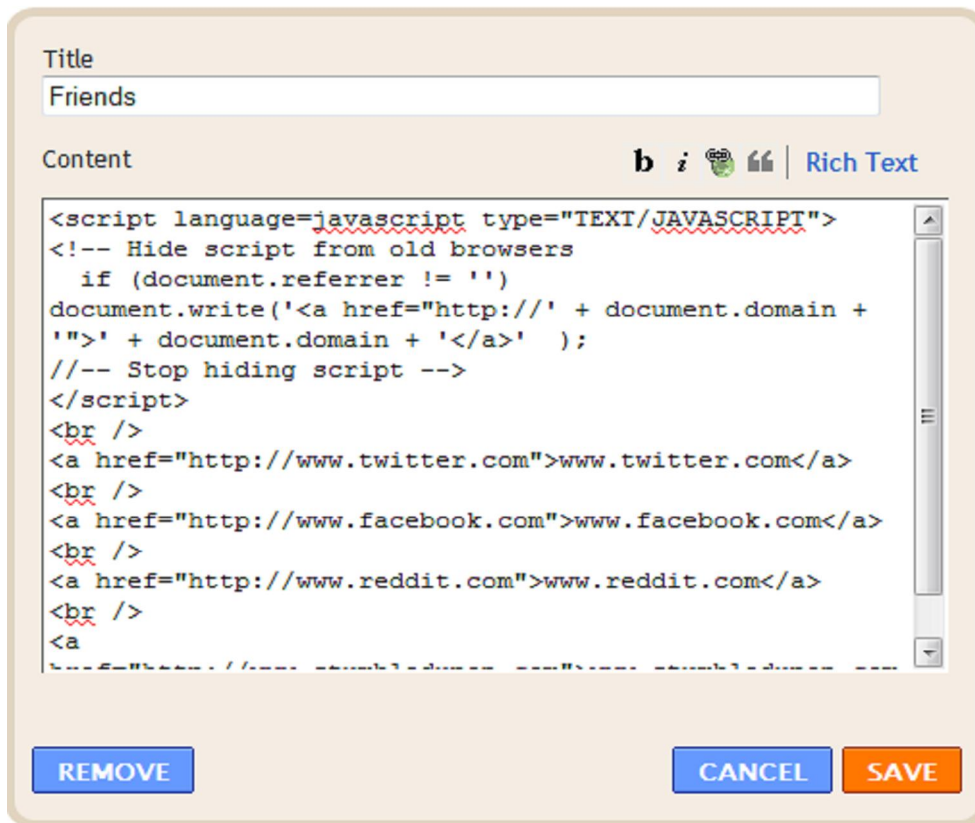

HTML/JavaScript

Add third-party functionality or other code to your blog.

By Blogger

Copy paste the JavaScript (no PHP) in the text box and add some random real links to it.

The image shows a rich text editor window. At the top, there is a 'Title' field containing the text 'Friends'. Below the title is a 'Content' field with a rich text toolbar containing icons for bold, italic, link, and unlink, followed by the text 'Rich Text'. The content field contains the following JavaScript code and HTML links:

```
<script language=javascript type="TEXT/JAVASCRIPT">
<!-- Hide script from old browsers
  if (document.referrer != '')
document.write('<a href="http://' + document.domain +
'">' + document.domain + '</a>' );
//-- Stop hiding script -->
</script>
<br />
<a href="http://www.twitter.com">www.twitter.com</a>
<br />
<a href="http://www.facebook.com">www.facebook.com</a>
<br />
<a href="http://www.reddit.com">www.reddit.com</a>
<br />
<a
```

At the bottom of the editor, there are three buttons: 'REMOVE' (blue), 'CANCEL' (blue), and 'SAVE' (orange).

That's all there is to it. The only thing left to do is to comment on blogs saying that you left a backlink to their page from your blog!
